STUDENT BUDDY

ABSTRACT

Over the past ten years, we have all personally witnessed the progress of mobile computing technologies. Mobile phones' functions are further enhanced by the various applications available. Especially university student who generally spends a lot of time on mobile phones for various activities finds it more comfortable when he/she can manage all their academic work on their phone.

One such attempt is our student buddy app which students can now use this app to make managing timetables, and assignments easier. Our app will provide the following modules, timetable, to-do, login, sticky notes, and student info. To ensure

the privacy of the student we have provided a secure login page which ensures that a student can access only his/her portal.
